Update: Option Class Opening Rotation Condition

As explained in MIC 2015-28, ISE identified limited situations when the ISE and ISE Gemini trading system may trigger an option opening rotation for a class of options prior to the open of the underlying on the primary listing market for the class. This is contrary to ISE's established practice. The situation was limited to equities whose primary listed market is NYSE, ARCA or NYSE MKT.

The software error causing the incorrect message handling has been fixed and implemented as of today, November 4, 2015.

If there are further questions, please contact Market Operations at 877-473-9989 or email helpdesk@ise.com.
